This floor mounted guardrail system has three versions of floor mounted railing holder. A single post receiver acts as the first and last piece of a typical safety railing installation. The double post receiver acts as the intermediate receiver for in-line railing runs. And finally, the dual-post receiver allows the railing to be turned at 90 degree increments on corners.

Optional fold-down railings allow easy access when needed. Railing lengths available from 2’ to 10’ increments.

Railing lengths available from 2’ to 10’ increments.

Our Face Mount Removable Safety Guardrail systems are the perfect answer to providing fall protection around pits or holes where mounting to the floor is not an option while maintaining the versatility to remove the railing when you don’t need it.

This face mounted guardrail system has two versions of wall mounted railing holder. A single post receiver acts as the first and last piece of a safety railing installation. The double post receiver acts as the intermediate receiver for in-line railing runs.

Railings lift out for side access to flatbeds in shipping pits.

Our Flush Mount Removable Safety Guardrail systems are the perfect answer to providing fall protection around pits or holes where having a railing holder standing above the floor is not an option.

This mount wraps over the edge of a pit or wall. Many times shipping pits will have a 3” angle iron embedded into the concrete to protect the edge.

Railings stand 42” above walking surface when mounted at top edge.
Our Accu-Fit ExpressRail Kits are a great way to permanently install small or long run railings on mezzanines, work stations, pedestrian walkways, loading docks - the uses are endless. Accu-Fit ExpressRail Kits can be ordered in the following sizes and configurations:

- 6' Straight Run - Galvanized (400771) or Galvanized with Yellow Powder Coat (400772)
- 6' x 6' Corner Run - Galvanized (400769) or Galvanized with Yellow Powder Coat (400770)
- 12' Straight Run - Galvanized (400773) or Galvanized with Yellow Powder Coat (400774)
- 6' Add-On Kit - Galvanized (400886) or Galvanized with Yellow Powder Coat (400885)

Pipe sections are 1 1/4” schedule 40 pipe. Pipe fittings and 42” tall stanchions come pre-assembled and securely packaged in a shipping box. Pipe sections can be trimmed easily on-site for shorter sections. Accu-Fit ExpressRail Kits are the quick, easy way to install OSHA compliant fall protection railing just about anywhere. Need toeboards? Just let us know. We’ll put it together anyway you need it.

SRC Permanent Mount Railings are another way to provide permanently mounted railings in a wide range of applications. These lightweight, pre-fabricated tube railings meet all OSHA regulations for fall protection and come in lengths ranging from 2’ to 10’. These work equally well for long or short runs with no pieces to assemble. Optional toeboards available.

Railings are available in powder coated safety yellow finish or a wide range of RAL custom colors. Galvanized or a combination galvanized and powder coated finishes also available.

Need something custom for your application? Just let us know, we are happy to help out.
At Safety Rail Company, all of our fixed railing system comply with appropriate OSHA and IBC safety standards.
